

T3 User Guide

Current room temperature

Time

Feeling cold? To increase the warmth in your home, press the + button to your desired target temperature

Feeling hot? To decrease the temperature in your home, press the - button to your desired target temperature.

AUTO = following programmed time and temperature schedule

MAN = manual operation. Use + and - to adjust temperature

Honeywell Home

Programmable thermostats give you a greater level of control by letting you set different desired temperatures at different times of the day.

The T3 will automatically go back to the next original time and temperature switch point so you never have to worry about forgetting to change it back.

Your engineer has already set up the thermostat to keep your house warm although if you need to warm it up more, follow the steps in this guide.
